LEARNING

Message from our Directors...

We are dedicated to the research and education of cannabis and cannabinoids, the chemical constituents of the cannabis plant. As one of the first Institutes focused on the multidisciplinary study of cannabis, we aim to educate generations and bring together experts from diverse fields to advance the understanding about the plant's impact on body, brain, and society.

More people are turning to cannabis for a variety of medical reasons; as a path to health and well-being, to alleviate mild health conditions and symptoms, and even to address chronic debilitating diseases. We hope to establish a lucrative network to pioneer all sectors within the Cannabis Industry.

On behalf of the TCI family best of luck!

WHY US?

TCI's courses provide prospective students with an opportunity to gain attitudes, skills, and knowledge in the Cannabis Sector, Management, Business Administration, and Horticulture domains.

CAREER SERVICE

Careers Service empowers students to take ownership of and make informed decisions about their futures through a broad range of advisory services and networking opportunities.

WHAT WE OFFER:

- 🌿 Free confidential career advice
- 🌿 Access to internships
- 🌿 Help with CVs, application and interview preparation
- 🌿 Financial Assistance through strategic partners in the financial sector
- 🌿 Help understanding the skills that employers want
- 🌿 Help with developing entrepreneurial skills
- 🌿 Career information and resources

SHORT COURSES

Ideal for learners who wish to upgrade their skills or refresh their knowledge, or to those who wish to expand into new areas of interest. These intensive courses are designed on various levels to suit beginners, intermediate and advanced candidates.

SKILLS PROGRAMMES

Occupationally based and when completed will carry credits towards a qualification registered in terms of the National Qualifications Framework.

NATIONAL CERTIFICATE

Complete an AgriSETA accredited One Year Qualification in CANNABIS PLANT PRODUCTION (NQF 2)

LEARNING IS FUN!

ACCREDITATION

TCI offers accredited Qualifications, as well as accredited and aligned short courses /skills programmes. The courses are practical in nature to ensure workplace readiness.

ENTREPRENEURSHIP

Gain access our database of industry professionals and let's get you started today! Our Business Solutions advisors are here to ensure you get the best out of your future!

PRACTICAL EXPERIENCE

Internships are built into our learning programmes as practical experience is critical to success! We believe the hands on approach is the best way to educate.

SKILLS AND JOB OPPORTUNITIES

Throughout your studies, you will gain practical skills and a critical understanding of agriculture, focusing on agronomy and horticulture production. The course content is based on the latest industry developments, enabling you to contribute effectively to primary crop production. Graduates will be well-equipped to enter the agricultural workforce and build successful careers with dedication and hard work.

METHODOLOGY

The National Certificate in Cannabis Plant Production is an engaging e-learning programme delivered via Moodle, featuring self-study, reading, and online assignments. The platform allows for discussions, article, image, and video sharing. Lecturers are available via email, SMS, WhatsApp, or phone throughout the year. Theoretical studies are completed online, while practical competencies are gained through workplace experience, with support provided through our work placement programme with Strategic Partners.

SHORT COURSES

Current Course ID	Course Name	NQF level	Credits	Cost	Certificate of Completion
US: 116077	Monitor Water Quality	2	3	R750.00	Yes
US: 116072	Perform Routine Operations and Identify Basic Problems in Hydroponic Systems	2	3	R750.00	Yes

SAQA ID	Course Name	NQF level	Credits	Cost	Certificate of Completion
48975	Cannabis Plant Production	2	120	R25,000.00	Yes

The purpose of this qualification is to allow Junior Personnel and elected candidates to progress towards a position of **farm labourers (operators) with specific reference to Cannabis Plant Production**. The contextualized purpose and usage of the qualification is as follows:

A learner assessed against this qualification will have the necessary competence to participate as part of a working team, performing the agricultural processes as applicable to Cannabis Plant Production in an established and familiar context under general supervision.

The Learner will be able to perform directed activities and take responsibility for the guiding others at lower level within a Plant Production context.

Competency will be gained in any of the specialized sub-field s of Plant Production as specified under Areas Of Specialization, in the Cannabis Sector.

The learner will be able to take responsible decisions within a familiar range based on a sound understanding of the basic principles of agri-business and good agricultural practices, in meeting the set objectives and targets within the broader farm plan which includes the economical application of general resources, **agricultural production and technical knowledge and skills, all in a Cannabis Plant Production context.**

In addition to the above, the learner will be well positioned to extend learning and practice into other sub-fields such as Plant Production and Mixed Farming, since such efforts will only require additional learning within the elective scope of other qualifications at this level.

The learner will be well positioned to progress towards higher levels of Management and Technical production practices as defined by qualifications at the next level.

Learners will be enabled to actively participate in the Primary Agricultural Sector through the production of quality agricultural products, enhancing the overall agricultural process and gain opportunities to access local, national and international agricultural markets.

The Learner will be able to carry out familiar procedures in a farm environment and will be able to adhere to the relevant safety, quality, hygiene and technical standards as applicable within the industry.

This qualification will allow qualifying learners to become economically active in farming practices that will have a direct impact on **Local Economic Development through the production of Cannabis** and access to mainstream agriculture.

Finally, Learners will be able to guide and direct others in terms of the implementation of smaller development projects within a Cannabis Plant Production context.

MEDICAL CANNABIS CPD

Course Name	CPD Points	Cost	Certificate of Completion
Professional Certificate of Medical Cannabis	25	R3,540.00	Yes

Outline of the Course

This course is comprised of the following Modules:

- The History of Cannabis
- Discover the diverse historical narrative of cannabis, from ancient civilizations to modern controversies, shedding light on its medicinal, cultural, and legal significance for medical professionals.
- The Endocannabinoid System
- Gain a comprehensive understanding of the endocannabinoid system's intricate functions and its implications for medical cannabis practice, exploring its role in physiology, disease, and therapeutic interventions.
- Cannabinoids (CBD and THC)
- Delve into the pharmacology, therapeutic potential, and clinical applications of the primary cannabinoids, CBD and THC, essential for medical professionals prescribing and caring for patients using medical cannabis.
- Delivery Methods Dosing and Drug Interactions
- Become knowledgeable in the diverse delivery methods, dosing strategies, and potential drug interactions of medical cannabis, essential for ensuring safe and effective patient care.
- Chronic Pain
- Explore the role of medical cannabis in chronic pain management, examining research, clinical evidence, and practical strategies for effective therapeutic interventions.

ACTIVITIES

Alongside our facilitation videos by the esteemed Dr Shiksha Gallow, this course offers various activities such as case studies, quizzes and open-access readings for further research and understanding.

COURSE LENGTH

This course is self-paced and takes an estimated 20 hours to complete, is spread over a period of 30 days.
